1 BILL CORRECTION WINDOW

- ✓ **Automated approval** process with **offline functionality** for accessibility.
- 🔔 **Auto-notifications** keep users informed of status updates.
- 🔍 Enhances **transparency**, trust, and efficiency in water management.
- 📋 Instant report of **incorrect bills** through **one-click** dispute button.
- 📅 Detailed **bill history** with month-to-month usage **comparisons**.

2 AUTOMATIC APPLYING SCHEMES

Schemes provided by all the levels shown in funnel integrated in app to streamline the process and remove all the middle levels in between DWSS and GPWCs.

Large surface water supply scheme in Punjab

This scheme aims District Moga of Punjab covering 85 villages and providing Tap water in low price.

A provision to select scheme applied on user while adding a new expense

3 SMART PAYMENTS

Online Payments

Allowing users to generate a QR code or send bill details via WhatsApp/SMS.
App auto-updates, generates a receipt, and forwards it to the user

Offline Sync

The Nal Jal Seva app securely stores offline payments locally and syncs them automatically once connectivity is restored, using AES encryption and UPI integration.

4 STREAMLING PAYMENT FUNNEL

Punjab

- DWSS(Decentralized water supply systems)
- 3 Zones
- 12 Circles
- 4300 GPWSCs

- Unify status updating
- Real-time transaction tracking
- Progress tracking between all 4 hierarchies

Process Streamlined

Reduced manpower

Enabled easy data verification

Enabled easy data requesting and logging

Reduced lag time between different hierarchies

5 WATER QUALITY CHECK

Manual Checking

A **local committee** be made to check and update the quality and availability of water using **remote sensors** which can be **updated on the app** consequently.

IoT based system

- Flow Sensors**
Measures flow rate and detect leakage.
Cost per unit - 2,000 to 5,000
• Measures flow - 200 (SLPM)
- Quality Sensors**
Measures pH, turbidity, TDS.
Cost per unit - 12,000 to 15,000
• WIFI connection and data transfer
- Gateway Devices**
Cost per site - 12,000 to 15,000
• IoT Gateways IBR200 router with WiFi
- Cloud Data Storage and Analysis**
Cost per site - 2,000 to 5,000
• Integrated Management Information System

6 TECH-NEWBIE FRIENDLY AUTOMATION

AI-Powered Chatbot that can provide **real-time assistance** for common queries, technical issues, and general support, available around the clock

Integrate **multilingual capabilities** to cater to users across different regions with varying **language preferences**.

SOLUTIONS

7 ISSUE TICKET THROUGH APP

AI-Integration

Automatic Ticket Categorization: Implement AI to categorize and prioritize support tickets based on the nature and urgency of the issue, ensuring that critical problems are addressed promptly.

AI-Generated FAQs: Use AI to dynamically generate and update frequently asked questions (FAQs) based on common user inquiries and issues.

8 AADHAR CARD ID

Aadhaar Integration

Incorporate Aadhaar card numbers as the primary identifier for each villager.

Data Retrieval

Developing a system that automatically retrieves relevant information (e.g., name, address, payment history) based on the entered Aadhaar.

Centralized Database

Maintain a centralized database to store villager information and payment records, ensuring easy access and tracking.

POTENTIAL BENEFITS

Ease the onboarding:
Eliminating the manual effort of entering individual data.

Efficiency and Accuracy:
Automated data entry minimizes errors and saves time.

Comprehensive Records:
Aadhaar-linked data enables easy payment tracking and defaulter identification.

Security and Transparency:
Aadhaar authentication enhances payment security and process transparency.

Risks and Mitigation

Data Privacy Concerns: There is a risk of data breaches or misuse of sensitive information stored in the centralized database.

Mitigation: Implement robust security measures, including encryption, access controls, and regular audits. Adhere to government regulations and industry best practices for data protection.
